Control and Coordination — MCQ Worksheet

Science • Chapter 6 • *25 Questions, 1 mark each — Total: 25 marks*

Instructions: *Choose the correct option (A / B / C / D) for each question. Each question carries 1 mark. There is no negative marking. Suggested time: 30 minutes.*

Q1. The structural unit of the nervous system is the:

(A) Nephron
(B) Neuron
(C) Alveolus
(D) Synapse

Q2. The gap between two neurons is called a:

(A) Axon
(B) Dendrite
(C) Synapse
(D) Cell body

Q3. The part of a neuron that receives signals is the:

(A) Axon
(B) Dendrite
(C) Cell body
(D) Synaptic knob

Q4. Reflex actions are controlled by the:

(A) Cerebrum
(B) Cerebellum
(C) Spinal cord
(D) Pituitary

Q5. Voluntary actions are mainly controlled by the:

(A) Cerebrum
(B) Cerebellum
(C) Medulla
(D) Pons

Q6. Balance and coordination of body movements is the function of the:

(A) Cerebrum
(B) Cerebellum
(C) Medulla
(D) Hypothalamus

Q7. Heartbeat and blood pressure are controlled by the:

(A) Cerebellum
(B) Hypothalamus
(C) Medulla oblongata
(D) Cerebrum

Q8. The 'master gland' of the body is the:

(A) Thyroid
(B) Pituitary
(C) Adrenal
(D) Pancreas

Q9. Iodine is needed for the synthesis of:

(A) Insulin
(B) Adrenaline
(C) Thyroxine
(D) Growth hormone

Q10. Deficiency of iodine causes:

(A) Diabetes
(B) Goitre
(C) Dwarfism
(D) Cretinism only

Q11. Insulin is secreted by the:

(A) Liver
(B) Pancreas
(C) Thyroid
(D) Pituitary

Q12. A diabetic person has a problem with:

(A) Calcium regulation
(B) Sugar regulation due to lack of insulin
(C) Iodine intake
(D) Adrenaline release

Q13. The 'fight or flight' hormone is:

(A) Insulin
(B) Thyroxine
(C) Adrenaline
(D) Testosterone

Q14. Testosterone is produced by the:

(A) Pituitary
(B) Pancreas
(C) Testes
(D) Adrenals

Q15. The hormone responsible for cell elongation in plants is:

(A) Cytokinin
(B) Auxin
(C) Abscisic acid
(D) Ethylene

Q16. Growth in plants towards light is called:

(A) Geotropism
(B) Phototropism
(C) Chemotropism
(D) Hydrotropism

Q17. Roots growing downward show:

(A) Negative geotropism
(B) Positive geotropism
(C) Phototropism
(D) Hydrotropism

Q18. The plant hormone that promotes cell division is:

(A) Auxin
(B) Cytokinin
(C) Gibberellin
(D) Abscisic acid

Q19. The hormone that inhibits growth and induces dormancy is:

(A) Gibberellin
(B) Cytokinin
(C) Abscisic acid
(D) Ethylene

Q20. Pollen tube growing towards ovule is an example of:

(A) Phototropism
(B) Chemotropism
(C) Geotropism
(D) Thigmotropism

Q21. The touch-me-not (Mimosa) plant folds its leaves on touch. This is due to:

(A) Growth response
(B) Sudden change in turgor pressure
(C) Hormonal effect
(D) Phototropism

Q22. Hormonal communication is generally:

(A) Faster than nerve impulses
(B) Slower than nerve impulses
(C) Equally fast
(D) Independent of bloodstream

Q23. The Central Nervous System (CNS) consists of:

(A) Brain only
(B) Spinal cord only
(C) Brain and spinal cord
(D) All nerves

Q24. Synaptic transmission of signals across neurons occurs through:

(A) Electrical sparks
(B) Neurotransmitters
(C) Hormones
(D) Antibodies

Q25. Action of a hormone is on:

(A) Every cell of the body equally
(B) Specific target cells/organs
(C) Only on muscles
(D) Only on bones
