

Control and Coordination (Set A) — MCQ Worksheet

Science • Chapter 6 • 25 Questions, 1 mark each — Total: 25 marks

Instructions: Choose the correct option (A / B / C / D) for each question. Each question carries 1 mark. There is no negative marking. Suggested time: 30 minutes.

Q1. The structural unit of the nervous system is the:

- (A) Nephron
- (B) Neuron
- (C) Alveolus
- (D) Synapse

Q2. The gap between two neurons is called a:

- (A) Axon
- (B) Dendrite
- (C) Synapse
- (D) Cell body

Q3. The part of a neuron that receives signals is the:

- (A) Axon
- (B) Dendrite
- (C) Cell body
- (D) Synaptic knob

Q4. Reflex actions are controlled by the:

- (A) Cerebrum
- (B) Cerebellum
- (C) Spinal cord
- (D) Pituitary

Q5. Voluntary actions are mainly controlled by the:

- (A) Cerebrum
- (B) Cerebellum
- (C) Medulla
- (D) Pons

Q6. Balance and coordination of body movements is the function of the:

- (A) Cerebrum
- (B) Cerebellum
- (C) Medulla
- (D) Hypothalamus

Q7. Heartbeat and blood pressure are controlled by the:

- (A) Cerebellum
- (B) Hypothalamus
- (C) Medulla oblongata
- (D) Cerebrum

Q8. The 'master gland' of the body is the:

- (A) Thyroid
- (B) Pituitary
- (C) Adrenal
- (D) Pancreas

Q9. Iodine is needed for the synthesis of:

- (A) Insulin
- (B) Adrenaline
- (C) Thyroxine
- (D) Growth hormone

Q10. Deficiency of iodine causes:

- (A) Diabetes
- (B) Goitre
- (C) Dwarfism
- (D) Cretinism only

Q11. Insulin is secreted by the:

- (A) Liver
- (B) Pancreas
- (C) Thyroid
- (D) Pituitary

Q12. A diabetic person has a problem with:

- (A) Calcium regulation
- (B) Sugar regulation due to lack of insulin
- (C) Iodine intake
- (D) Adrenaline release

Q13. The 'fight or flight' hormone is:

- (A) Insulin
- (B) Thyroxine
- (C) Adrenaline
- (D) Testosterone

Q14. Testosterone is produced by the:

- (A) Pituitary
- (B) Pancreas
- (C) Testes
- (D) Adrenals

Q15. The hormone responsible for cell elongation in plants is:

- (A) Cytokinin
- (C) Absciscic acid

- (B) Auxin
- (D) Ethylene

Q16. Growth in plants towards light is called:

- (A) Geotropism
- (C) Chemotropism

- (B) Phototropism
- (D) Hydrotropism

Q17. Roots growing downward show:

- (A) Negative geotropism
- (C) Phototropism

- (B) Positive geotropism
- (D) Hydrotropism

Q18. The plant hormone that promotes cell division is:

- (A) Auxin
- (C) Gibberellin

- (B) Cytokinin
- (D) Absciscic acid

Q19. The hormone that inhibits growth and induces dormancy is:

- (A) Gibberellin
- (C) Absciscic acid

- (B) Cytokinin
- (D) Ethylene

Q20. Pollen tube growing towards ovule is an example of:

- (A) Phototropism
- (C) Geotropism

- (B) Chemotropism
- (D) Thigmotropism

Q21. The touch-me-not (Mimosa) plant folds its leaves on touch. This is due to:

- (A) Growth response
- (C) Hormonal effect

- (B) Sudden change in turgor pressure
- (D) Phototropism

Q22. Hormonal communication is generally:

- (A) Faster than nerve impulses
- (C) Equally fast

- (B) Slower than nerve impulses
- (D) Independent of bloodstream

Q23. The Central Nervous System (CNS) consists of:

- (A) Brain only
- (C) Brain and spinal cord

- (B) Spinal cord only
- (D) All nerves

Q24. Synaptic transmission of signals across neurons occurs through:

- (A) Electrical sparks
- (C) Hormones

- (B) Neurotransmitters
- (D) Antibodies

Q25. Action of a hormone is on:

- (A) Every cell of the body equally
- (C) Only on muscles

- (B) Specific target cells/organs
- (D) Only on bones
