

Our Environment (Set B) — MCQ Worksheet

Science • Chapter 13 • 25 Questions, 1 mark each — Total: 25 marks

Instructions: Choose the correct option (A / B / C / D) for each question. Each question carries 1 mark. There is no negative marking. Suggested time: 30 minutes.

Q1. Two main components of an ecosystem are:

- (A) Biotic and abiotic
- (B) Land and water
- (C) Animals and plants
- (D) Producers and consumers

Q2. Energy flow in an ecosystem is:

- (A) Unidirectional
- (B) Cyclic
- (C) Both directions
- (D) Random

Q3. About what percent of energy is passed to next trophic level (10% law)?

- (A) 10%
- (B) 1%
- (C) 50%
- (D) 100%

Q4. Most food chains are typically how long?

- (A) 3-4 trophic levels
- (B) 10 levels
- (C) Single level
- (D) Two only

Q5. Decomposers (bacteria, fungi) help in:

- (A) Breaking down dead organisms; recycling nutrients
- (B) Killing primary producers
- (C) Producing oxygen
- (D) Trapping sunlight

Q6. Biological magnification refers to:

- (A) Concentration of harmful chemicals at higher trophic levels
- (B) Body size increase
- (C) Growth of plants
- (D) Cell division

Q7. Plastic is:

- (A) Non-biodegradable
- (B) Biodegradable
- (C) Edible
- (D) Soft only

Q8. Composting is conversion of biodegradable waste into:

- (A) Nutrient-rich manure
- (B) Plastic
- (C) Glass
- (D) Metals

Q9. Ozone layer is mainly located in:

- (A) Stratosphere
- (B) Troposphere
- (C) Mesosphere
- (D) Thermosphere

Q10. Ozone is a form of:

- (A) Oxygen (O_3)
- (B) Nitrogen
- (C) Carbon dioxide
- (D) Hydrogen

Q11. Ozone layer protects life from:

- (A) UV radiation from sun
- (B) X-rays
- (C) Infrared
- (D) Microwaves

Q12. Main chemicals responsible for ozone depletion are:

- (A) Chlorofluorocarbons (CFCs)
- (B) Carbon dioxide
- (C) Methane
- (D) Sulphates only

Q13. Newspapers, cotton, kitchen waste are:

- (A) Biodegradable
- (B) Non-biodegradable
- (C) Toxic
- (D) Plastics

Q14. An ecosystem includes:

- (A) Organisms and their non-living environment, interacting together
- (B) Only animals

(C) Only plants

(D) Only water

Q15. A pond is an example of:

(A) A natural ecosystem

(B) An artificial ecosystem

(C) A factory

(D) A monument

Q16. Why is a food web more stable than a single food chain?

(A) Multiple links allow alternative energy flow if one species disappears

(B) It is longer

(C) It uses no decomposers

(D) Decomposers are absent

Q17. In an aquarium, what should be added to make it a balanced ecosystem?

(A) Plants (producers), fish (consumers), microbes (decomposers), and a source of light

(B) Only fish

(C) Only stones

(D) Only water

Q18. Concentration of DDT increases up the food chain because:

(A) It is fat-soluble and not excreted; accumulates at each step

(B) It is water-soluble

(C) Plants absorb most of it

(D) It is degraded easily

Q19. Most polluting solid waste in urban India is generally:

(A) Plastic and packaging waste

(B) Wooden items

(C) Glass

(D) Steel

Q20. Recycling of newspaper into pulp is environmentally helpful because:

(A) Saves trees and reduces solid waste

(B) It is cheap

(C) Newsprint is dangerous

(D) Glass becomes paper

Q21. Tertiary consumers in a food chain are:

(A) Carnivores that eat other carnivores

(B) Plants

(C) Herbivores

(D) Decomposers

Q22. In grass → grasshopper → frog → snake → eagle, eagle is:

(A) Quaternary consumer

(B) Primary consumer

(C) Decomposer

(D) Producer

Q23. The 4 Rs of waste management are:

(A) Refuse, Reduce, Reuse, Recycle

(B) Reach, Run, Repair, Remove

(C) Read, Recycle, Roast, Renew

(D) Restore, Remind, Reuse, Refrigerate

Q24. Why is the use of jute bags preferred over plastic bags?

(A) Jute is biodegradable; plastic is not

(B) Plastic is heavier

(C) Jute is cheaper always

(D) Plastic is non-existent

Q25. If green plants (producers) are removed from an ecosystem, what happens?

(A) Whole ecosystem collapses; no food/oxygen for other levels

(B) Only insects die

(C) Nothing happens

(D) Decomposers multiply
